

GET ENERGIZED ABOUT

EARTH DAY

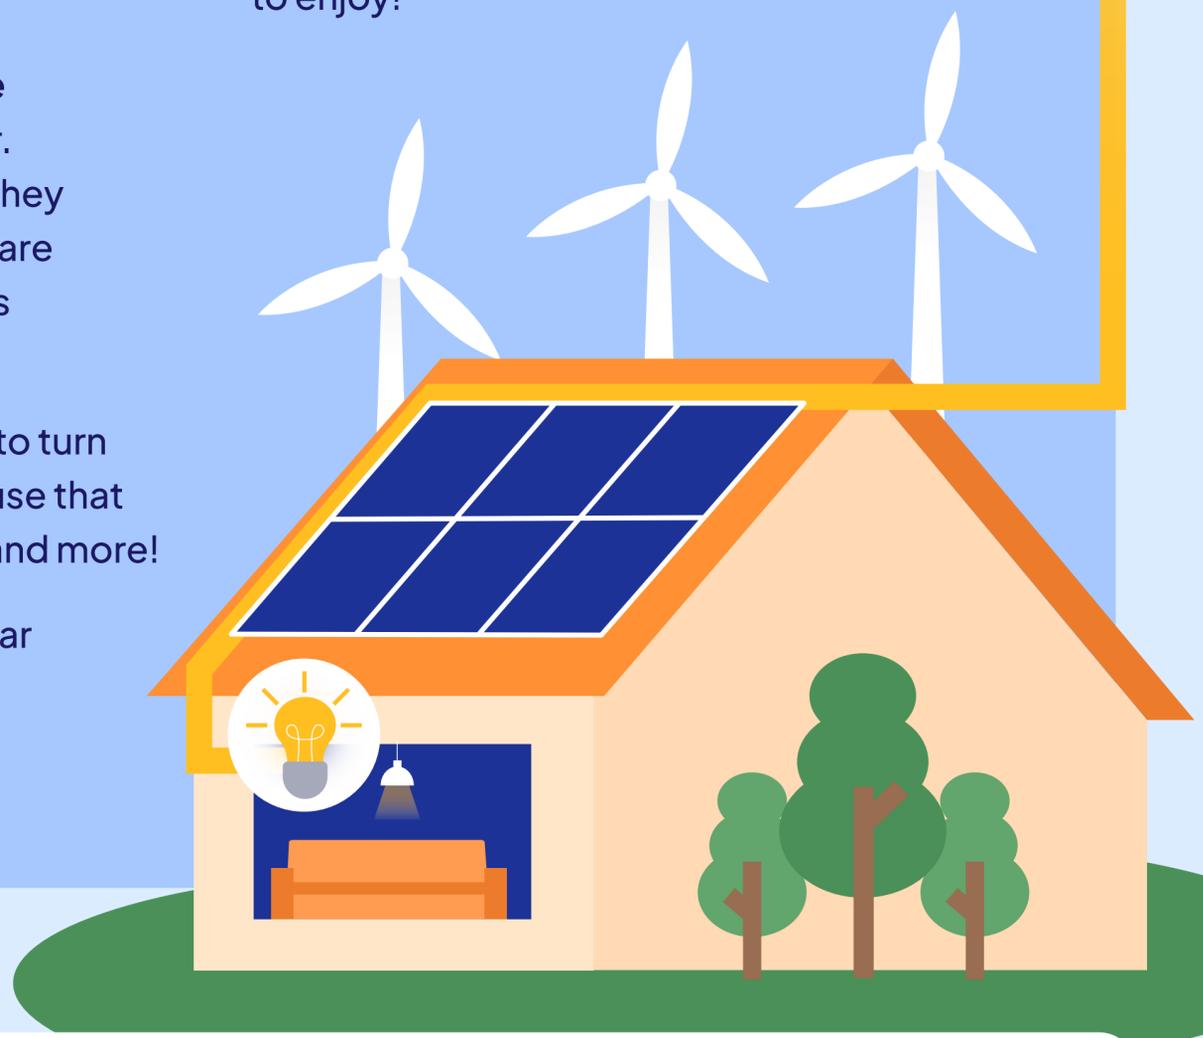

Out of all the planets in space, Earth is very special! Earth provides us with natural resources that humans, plants, and animals need to survive. **Natural resources** are things that come from nature.

Some natural resources are **renewable resources** like the sun, wind, and water. We can use them again and again and they won't run out. Other natural resources are **nonrenewable resources** which means once we use them, they are gone.

Today we have different technologies to turn renewable resources into energy. We use that energy to power our homes, schools, and more!

Examples of **renewable energy** are solar power, wind power, hydropower, and geothermal power.

Earth is everyone's home. By using renewable energy, we protect our planet. Protecting our planet is important so we all have clean and healthy air, water, and land for everyone to enjoy!

Earth is everyone's home

What are some of the ways YOU can help protect our planet?!

Reduce, reuse, recycle

Plant a tree or garden

Walk or ride your bike

Turn off lights to save energy

Tell your friends & family

Use renewable energy
